

Lab: Single-table queries, part 2

Make a serious effort to answer all questions from memory before referring to lecture slides or other resources.

1. Load the '1994-census-summary.sql' data into SQLite.
2. Write SQL to answer the following questions:
 - a. what 'workclass' values appear in the data? (don't show any duplicates)
 - b. what is the minimum number of years of education in the data?
 - c. what is the average age of people in the data?
 - d. how many countries of birth appear in the data?
 - e. which native countries start with "F"?
